DVP Nav-to-Net 4.0

The e-commerce solution for Microsoft Dynamics™ NAV using .NET technology

DVP's Nav-To-Net is a fully integrated Business to Consumer/Business/Employee e-commerce product written exclusively for Microsoft Dynamics™ NAV. Nav-to-Net is built on Microsoft stack technologies. Written in .NET, the application takes integrated e-commerce to a new level with more features, simplified web management and reduced maintenance costs.

Nav-to-Net is a secure, reliable and trustworthy solution that will increase customer satisfaction and enhance e-commerce agility and business development.

With Nav-to-Net, your management and maintenance costs will be reduced through:

- Full integration with Microsoft Dynamics™ NAV
- Lower training costs - virtually everything is managed in MS Dynamics™ NAV
- Decreased Web development and consulting services

Advanced Item and Category Management

Both B2B and B2C shoppers will get easy access to your products through a user friendly environment based on an unlimited number of catalogues, categories and subcategories. Comprehensive item information such as photos, illustrations, downloadable files, specifications and extended item information are all managed from Microsoft Dynamics™ NAV.

Improved Business Agility

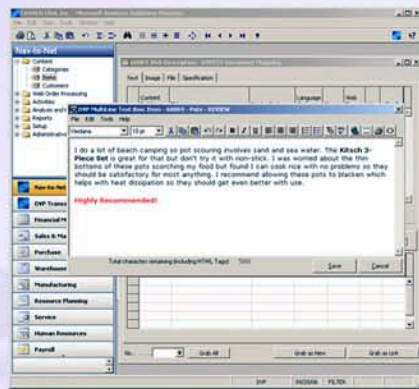

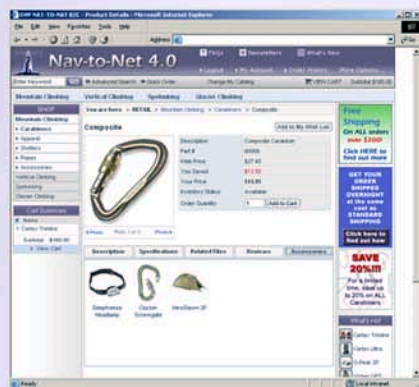

With Nav-to-Net, you can manage the contents of your e-commerce web site from Microsoft Dynamics™ NAV without the need for costly third-party web development resources. The solution will automatically synchronize your changes to the web site as they happen. No manual synchronization is required during day-to-day operations.

Always Take Order

Nav-to-Net provides a very high level of security and availability. Nav-to-Net's Always Take Order (ATO) philosophy ensures that your customers can still shop and place orders even if the connection to your back end system is interrupted.

About Digital Vantage Point
